Comparison of wealth and residence

Percentage of children in a school attendance age

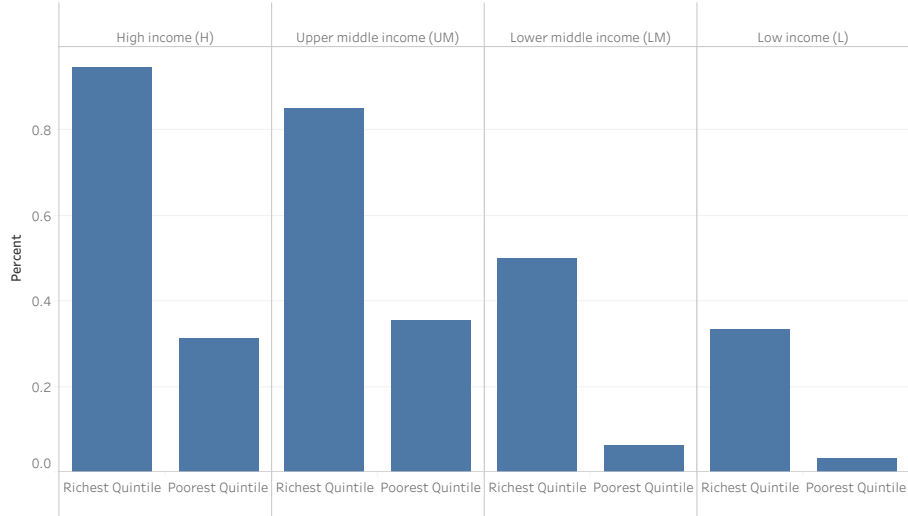

Global School-Age Digital Connectivity

Map

Comparison of wealth and residence

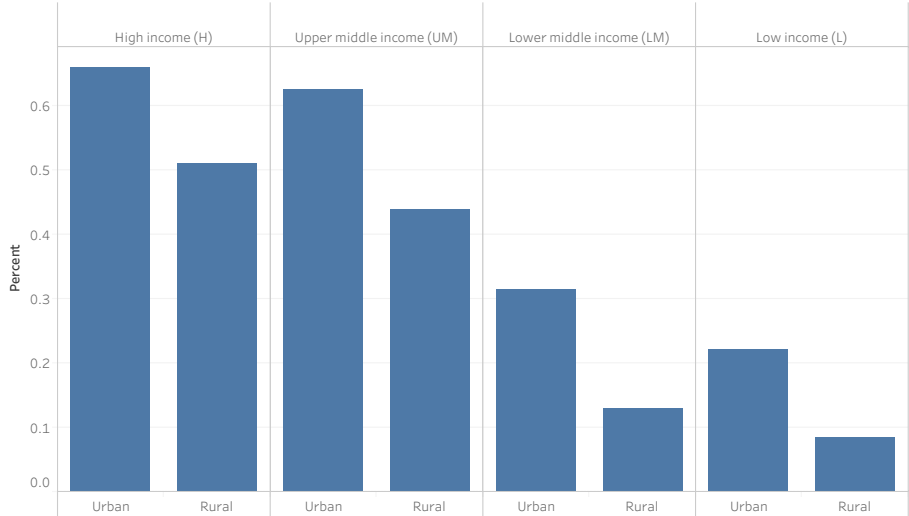

Percentage (average) of children in a school attendance age by wealth

Difference

Income Group	Population	
	Richest ..	Poorest..
High income (H)		-0.6356
Low income (L)		-0.3049

Percentage (average) of children in a school attendance age by residence

Difference

Income Group	Population	
	Urban	Rural
High income (H)		-0.14865
Low income (L)		-0.13764

Analysis:
Based on the comparison, wealth is more critical factor (than residence) to determine the percentage of children in a school attendance age.
